

Screed Accessories

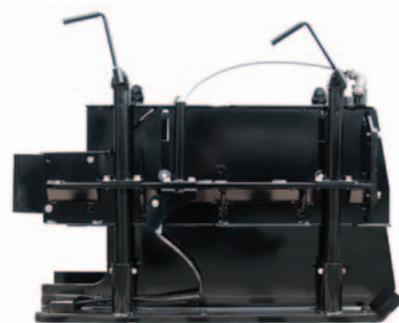

EZIII & EZIV

Carlson Paving Products, the premier manufacturer of innovative paving solutions for over 25 years.

Heated End Gate

- Improves longitudinal joint quality by reducing thermal segregation
- Reduces shadowing, tearing, and scabbing of joint interface
- Eliminates operator maintenance and wash down, causing premature failure
- Keeps crew members from working in unsafe area adjacent to traffic
- 500 degree end gate runner preheats adjacent mat and forces more material into joint interface increasing joint lifecycle

Power Tunnel Kit

- Helps maintain uniform head of material at any width
- Reduces load forces against screed limiting depth changes due to head of material inconsistencies
- Protects tracks and tires from overheating causing delaminating of rubber compounds
- Reduces material handling component wear therefore increasing lifecycle
- Manual extend and auto retract to limit impact areas

Vibratory Notched Beveled Edger

- Available in 12" and 18" widths
- Use with vibratory sled for improved density or statically without vibratory sled
- Will work on left or right side of screed limiting the need for multiple units
- Notch is a variable adjustment 2" down from mat surface
- Spring loaded outside edge as to not interfere with ride characteristics
- 0 to 3000 vibrations per minute adjustment
- Plumed with quick disconnects for fast installation
- Vibratory sled doubles as berm compactor
- Beveled edger has heat and angle of attack / vibratory sled has heat and vibration

Great paving demands great craftsmanship

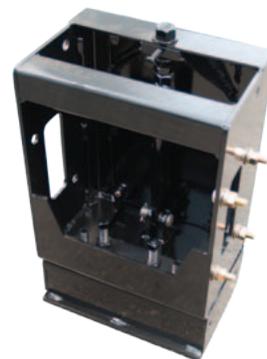

Safety Edge End Gate

- Superior bevel using heat and extruding material for higher density
- Applied bevel will not deform under compaction process
- Bevel rotates from 90 degrees for matching joints to 30 degrees for applying the safety bevel quick and easy
- Spring loaded as to not interfere with ride quality characteristics or deviations in milled surfaces
- Third end gate jack to roll in and out of bevel faster and safer
- Hinged lower unit is a replaceable wear component

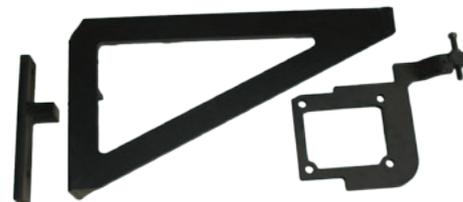

Bolt On Segments

- Available in 12", 18" and 24" segments
- Available with heat or without heat
- When using more than two segments or one segment with heated end gates a "Y" cable will be needed

Wide Width Support Kit

- Used when adding 4' or more bolt on extensions to any easy screed
- Easy install to Carlson EZIII or EZIV screeds
- Welding of permanent brackets to outside of main necessary
- Don't go wide without the wide width support kit
