West Virginia Division of Highways Asphalt Content By The Ignition Method (AASHTO T308, Test Method A) Mix Design Calibration And Gradation Comparison Worksheet

Lab Number:	Materia	ıl: Field Sample #:						
Technician:		T400 #: Date:						
Data Before Ignitio	n Test Temp:		°C	1	2	3	4	
Actual Percent Aspr	alt Of Prepared	Samples						
(A) Weight of Basket + Sample								
(B) Weight of Basket								
(C) Sample Weight								
Data After Ignition								
(D) Weight of Basket + Aggregate								
(E) Weight of Basket								
(F) Aggregate Weight (D - E)								
(G) Asphalt Content								
or [(C - F) / C] X 100 (only when printer malfunctions)								
If the difference between the measured asphalt contents of the first two samples exceeds 0.15								
percent repeat the two tests and, from the four tests, discard the high and low result. Determine								
calibration factor below from the remaining results.								
Calibration Factor of Two Tests Determined In Accordance With Above Requirement								
(H) Difference Betw	een Actual Sam	ple Asphalt						
Content and Measured Asphalt Content (G)								
(J) Average Calibration Factor of Mix Design								
If the calibration factor exceeds 1.0 percent, lower the test temperature from 538 $^\circ$ C to 482 ± 5 $^\circ$ C								
and repeat test. Use the calibration factor obtained at 482 ℃ even if it exceed 1.0 percent.								
	Agç	gregate Grad	dation Calil	bration Resu	ults			
	Blank Agg.	Ignition Oven Burn Off			Aggregate Calibration Samples			
Sieve	Sample	Sample 1		Sam	Sample 2		Correction	
Size	Gradation	% Passing	Difference	% Passing	Difference	Difference	Factor (±)	
2 in (50 mm)	ا ا							
1 1/2 in (37.5 mm)	ا ا							
1 in (25 mm)	ļ	[
3/4 in (19 mm)	<u>ا</u>							
1/2 in (12.5 mm)	ļ	[
3/8 in (9.5 mm)	ļ	[
No. 4 (4.75 mm)	 							
No. 8 (2.36 mm)	ا ا	ļ						
No. 16 (1.18 mm)	ļ	[
No. 30 (600 μm)	ا ا	ļ						
No. 50 (300 μm)	<u>ا</u>							
No. 200 (75 μm)	ļ							
For each calibration sample, subtract the % passing each sieve from the actual blank value. Indicate when the subtracted								
value is more than the blank sample using a negative "-" sign. Calculate the average difference of the two samples. If the								
average difference for any sieve is greater than the value permitted in Table-2 of AASHTO T-308, then apply the guidelines								
of Section 6.11 of this	procedure in ass	igning correcti	ion factors to	individual siev	es.			
Attach all asphalt content oven printouts and T417 calibration sample gradation results to this report.
