

# Nokia True

Michael Holzer  
Team Lead, Washington, DC

# Nokia Maps: Customers and Services

Websites, Navigation Systems, In-Car Navigation, Mobile Phones, and a number of other products.

# Our Database

Hundreds of navigation attributes

*Nokia Maps  
Data and Products*

Centerlines, addresses, naming,

POIs

Lane guidance, trucking, and 3D

Pedestrian and transit

# Pillars of Field Collection

## ▶ **Global Field Operations**

- ▶ Strategically distributed network of geographic analysts

## ▶ **Local Knowledge and Contacts**

- ▶ Applied to single, worldwide database specification

## ▶ **State of the Art Tools & Technology**

- ▶ Proprietary software tools
- ▶ Over 400 patents related to field collection and processing

# Sources of Data

Creating and maintaining our data

*Local field  
driving and  
research*

*News and  
construction*

*GIS and DOT*

# Data Collection Methodology

Nokia focuses on quality every step of the way.

## Collecting

thousands of sources including field driving

## Validating

and verifying hundreds of attributes

## Testing

database and real world functionality

# More Attributes + More Products = More Changes

Nokia processes an average of  
**2.4 million changes per day**

# Nokia (NAVTEQ) TRUE™

# What is Nokia True?

**The most  
comprehensive data  
collection platform  
on Earth**

Implement automated feature recognition

Improve operational efficiency through broad TRUE deployment

Innovate on top of platform: 3D and beyond

# True Collection System

Every component has a unique role.

**360° LIDAR**  
generates a 3D  
model of the  
world, taking  
automation to a  
whole new level

**Hi Res and  
Panoramic Cameras**  
sophisticated  
synchronization  
extends types of  
content that can be  
collected

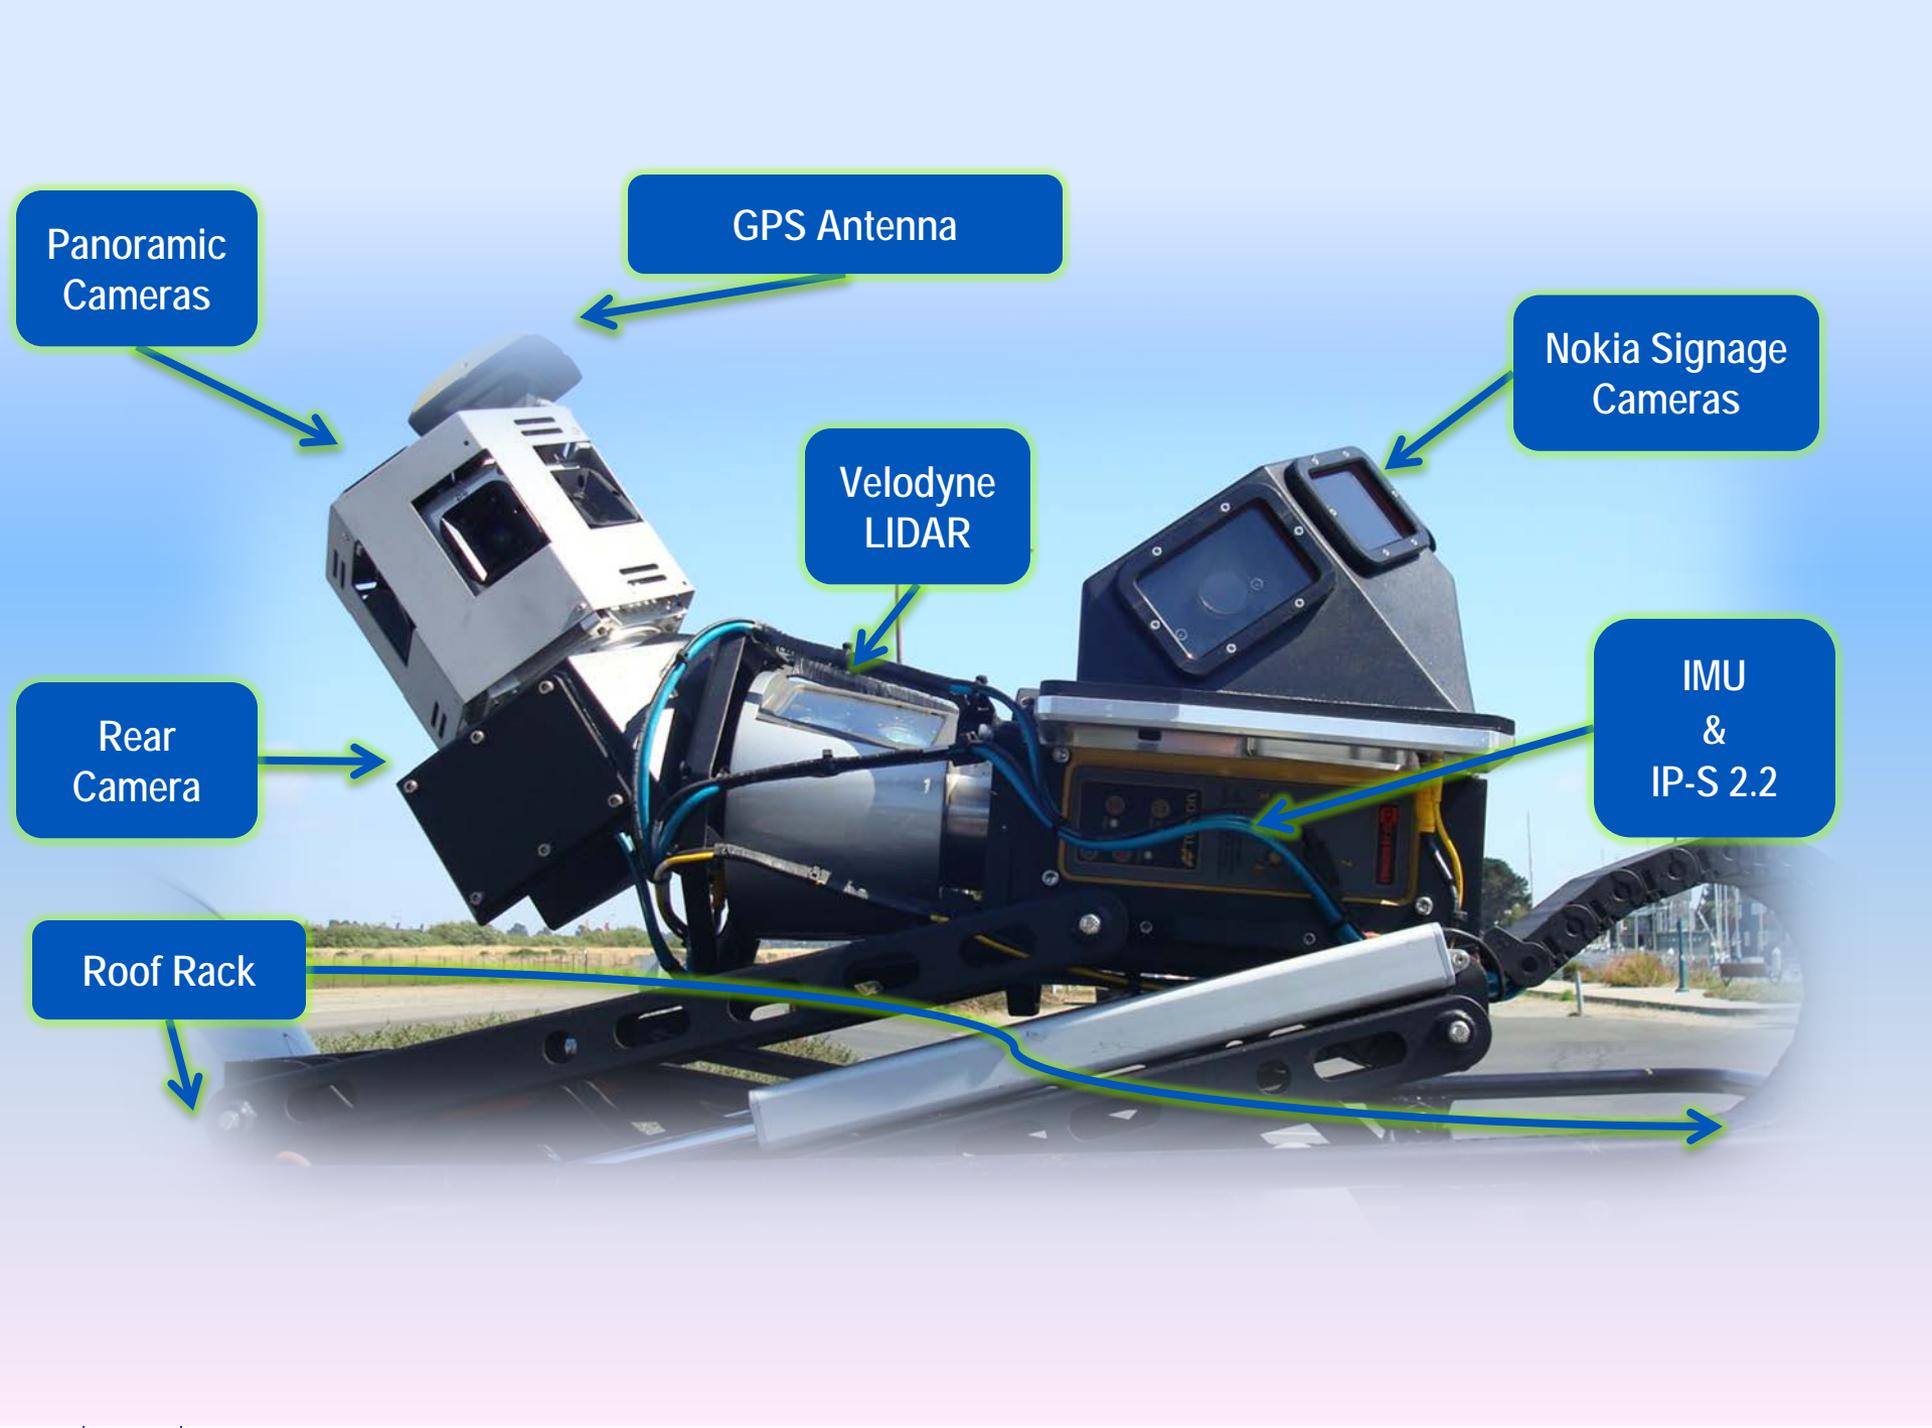

**Positioning  
Sensors**  
incredible  
precision ensures  
every individual 3D  
point is accurately  
geo-referenced

# Sensors to Enable The Precision and Accuracy of Collection

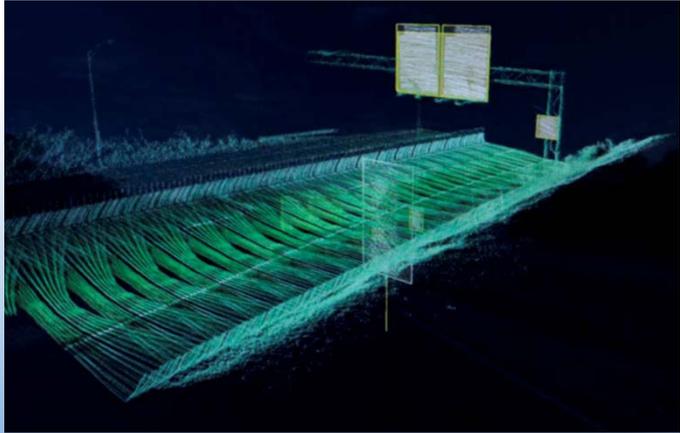

# What is LIDAR?

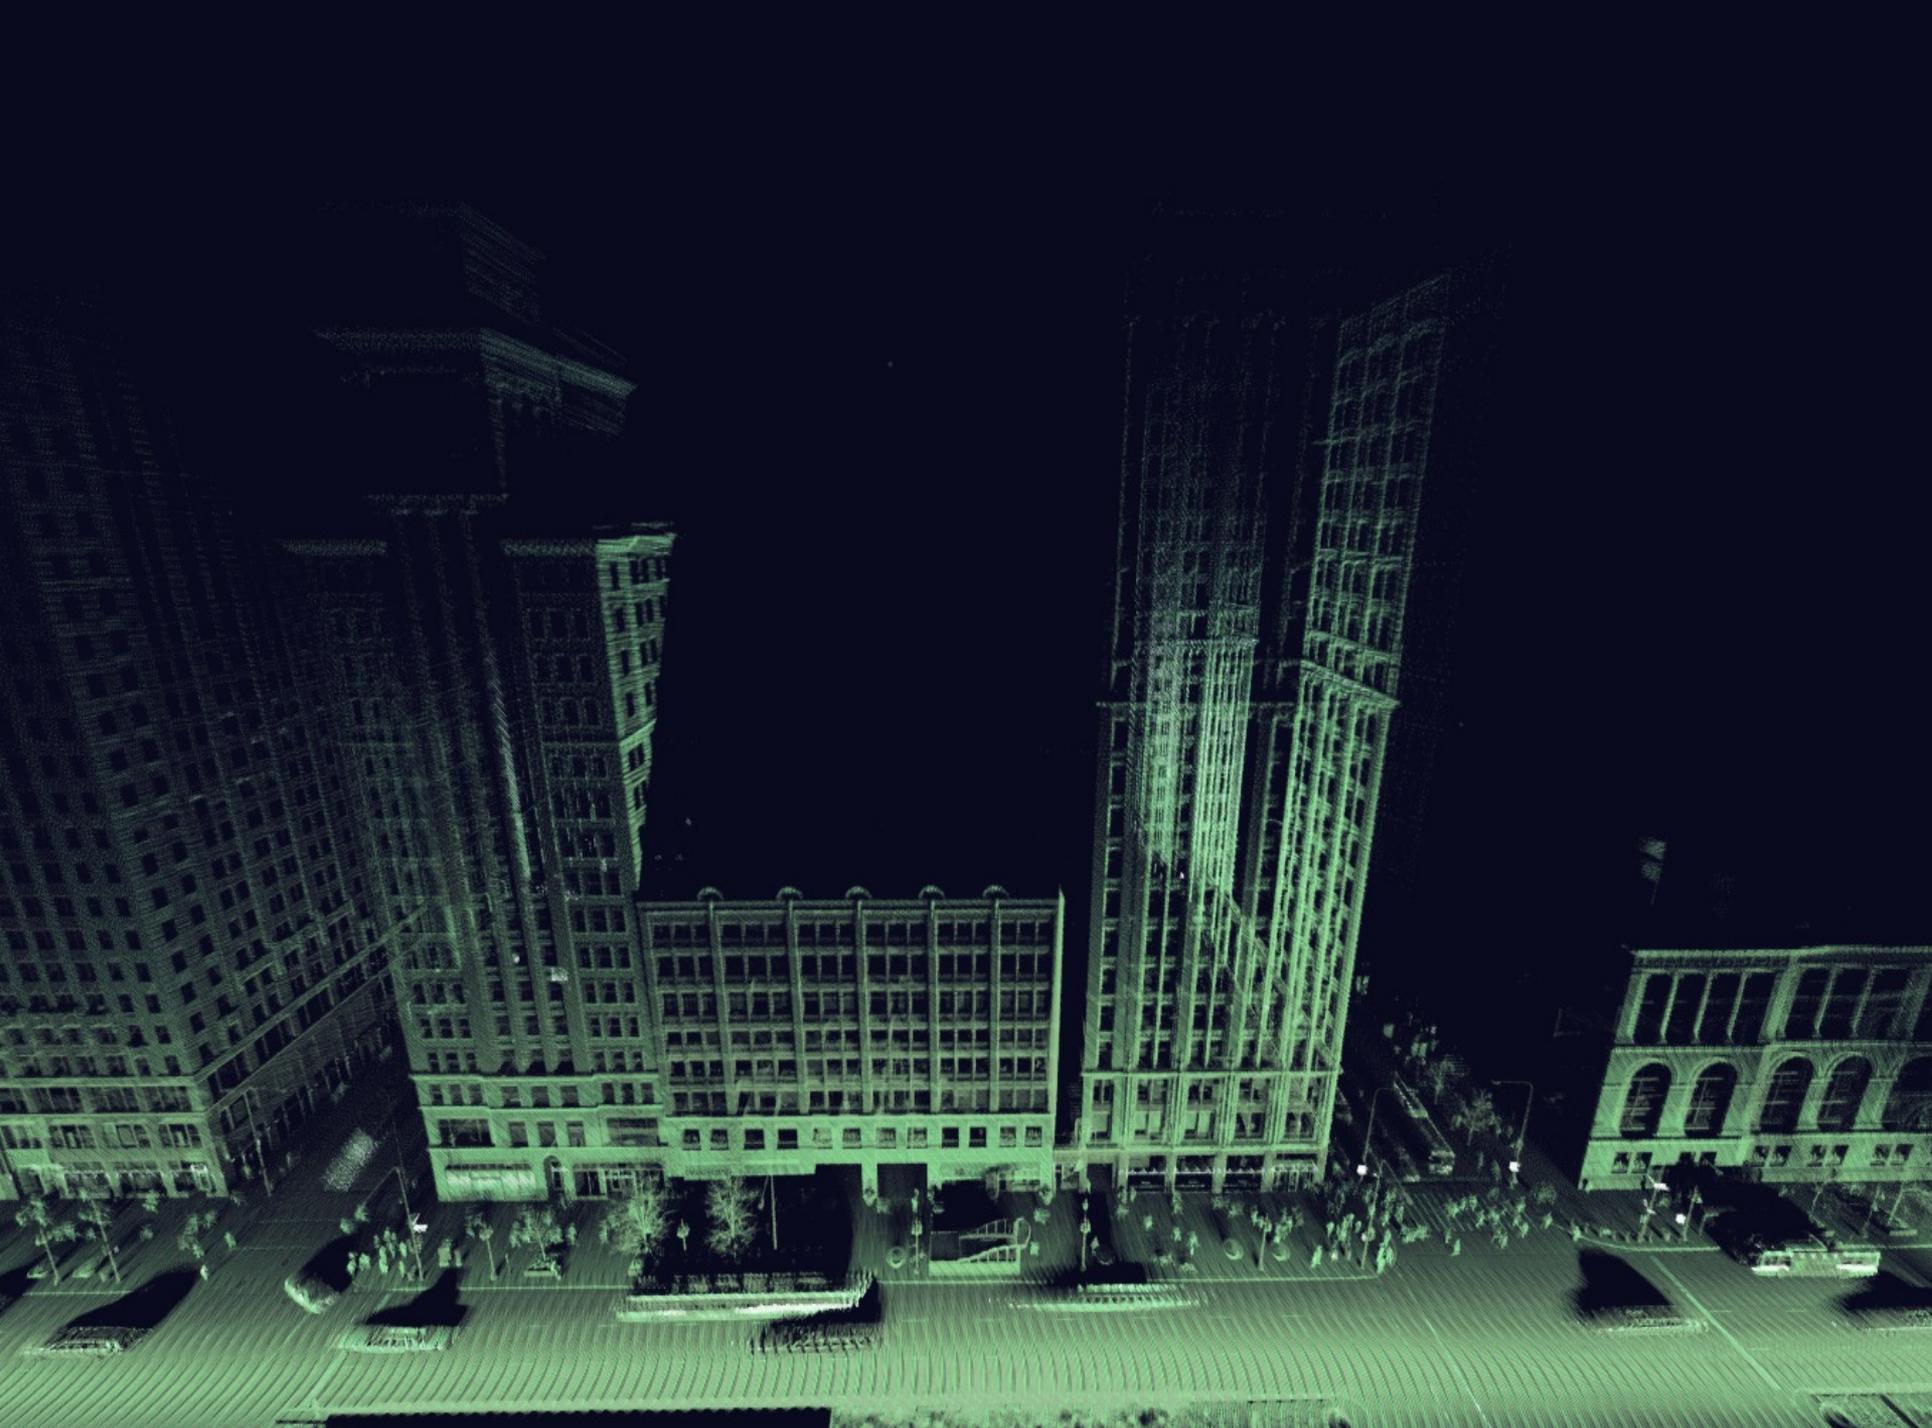

- Pulses of high-intensity light to create 360-degree coverage
- Overlapping lasers at multiple angles ensure dense coverage
- Can provide full coverage up to 70mph

# LIDAR: Capturing a 3D Perspective

- ▶ 3D collection from multiple angles of access
- ▶ 360 degree maximizes size of point cloud
- ▶ 100 meter range

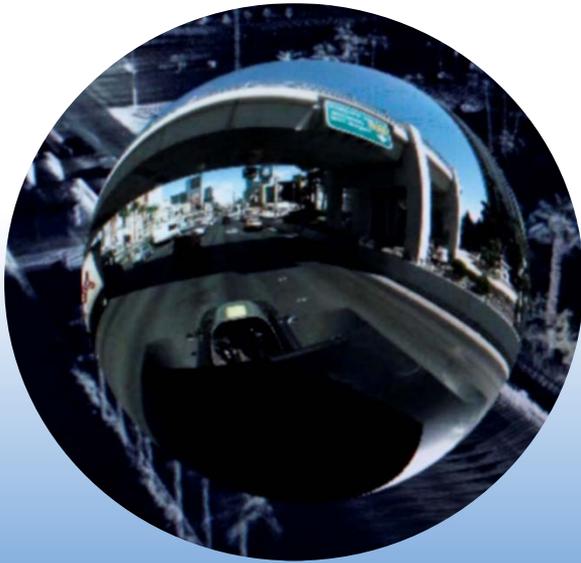

# 64 Lasers Creating a 3D Representation

# Density and Detail

# High-res and Panoramic Cameras

- High-resolution cameras
- Panoramic cameras

# Multiple Cameras Support Depth and Breadth of Product Development

Each camera has a specific value in enabling advanced location-based use cases

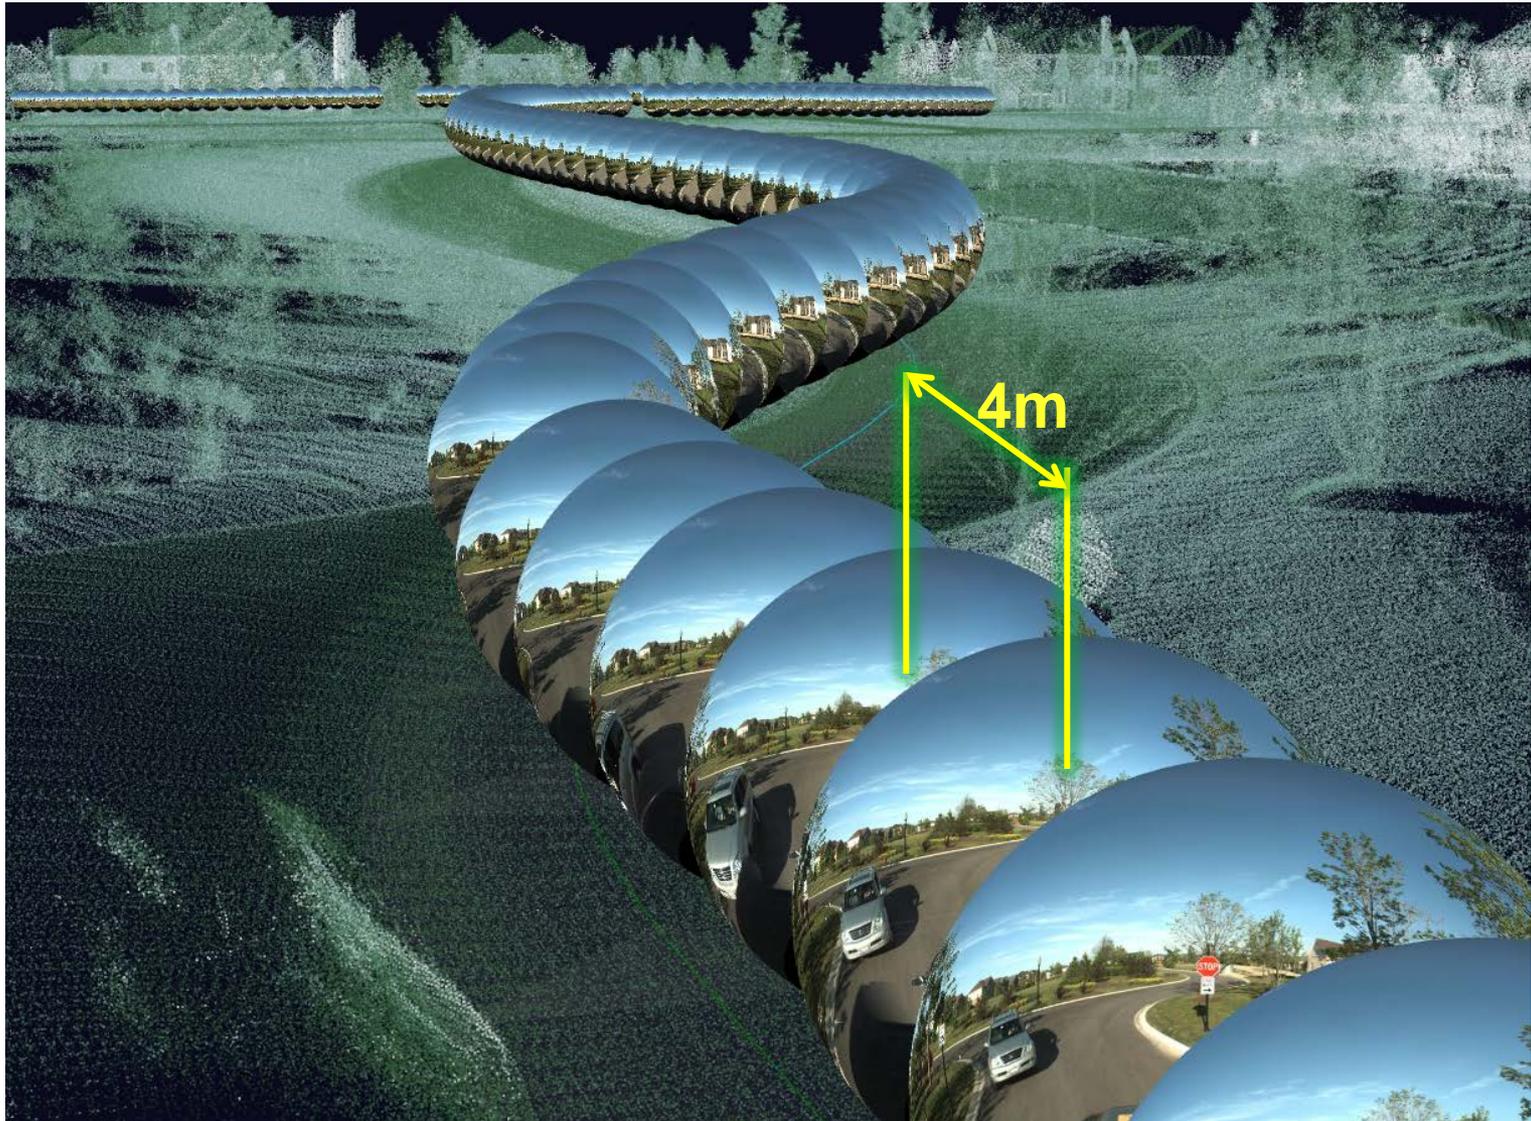

- ▶ **Microsoft Panoramic cameras:** 6 looking horizontal in a 360° field 2 looking vertical
- ▶ **Signage Cameras:** 270° field of view enable collection of signage including storefront signage
- ▶ **Rear camera** can be mounted for left or right hand side driving countries for a different perspective

# Panoramic Imagery

- ▶ Provides Context and Navigation
- ▶ Instantaneous Snapshot: Temporal Comparison
- ▶ Introduces Orientation Dependency

# Image Every Four Meters

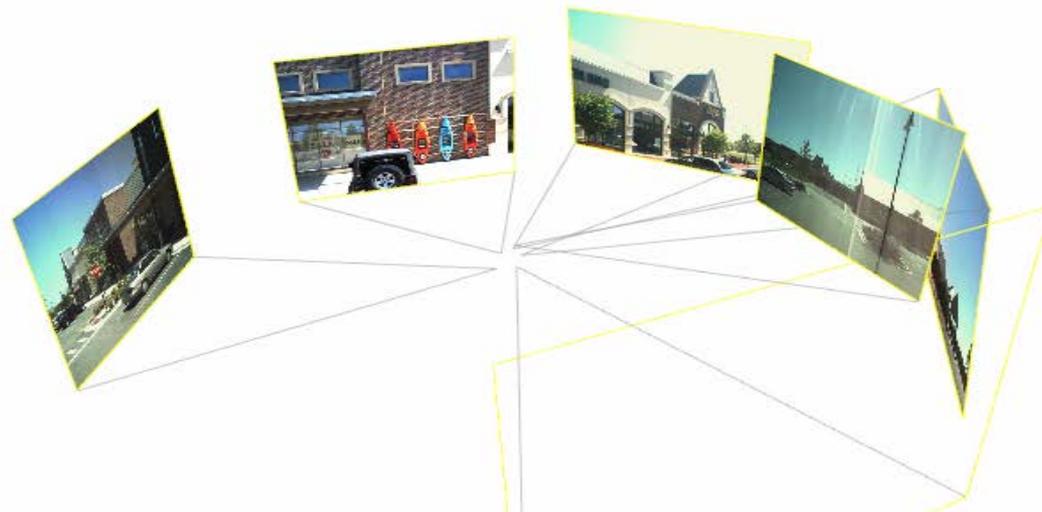

# Microsoft Cameras - Full Perspective

# High-Resolution Targeted Cameras

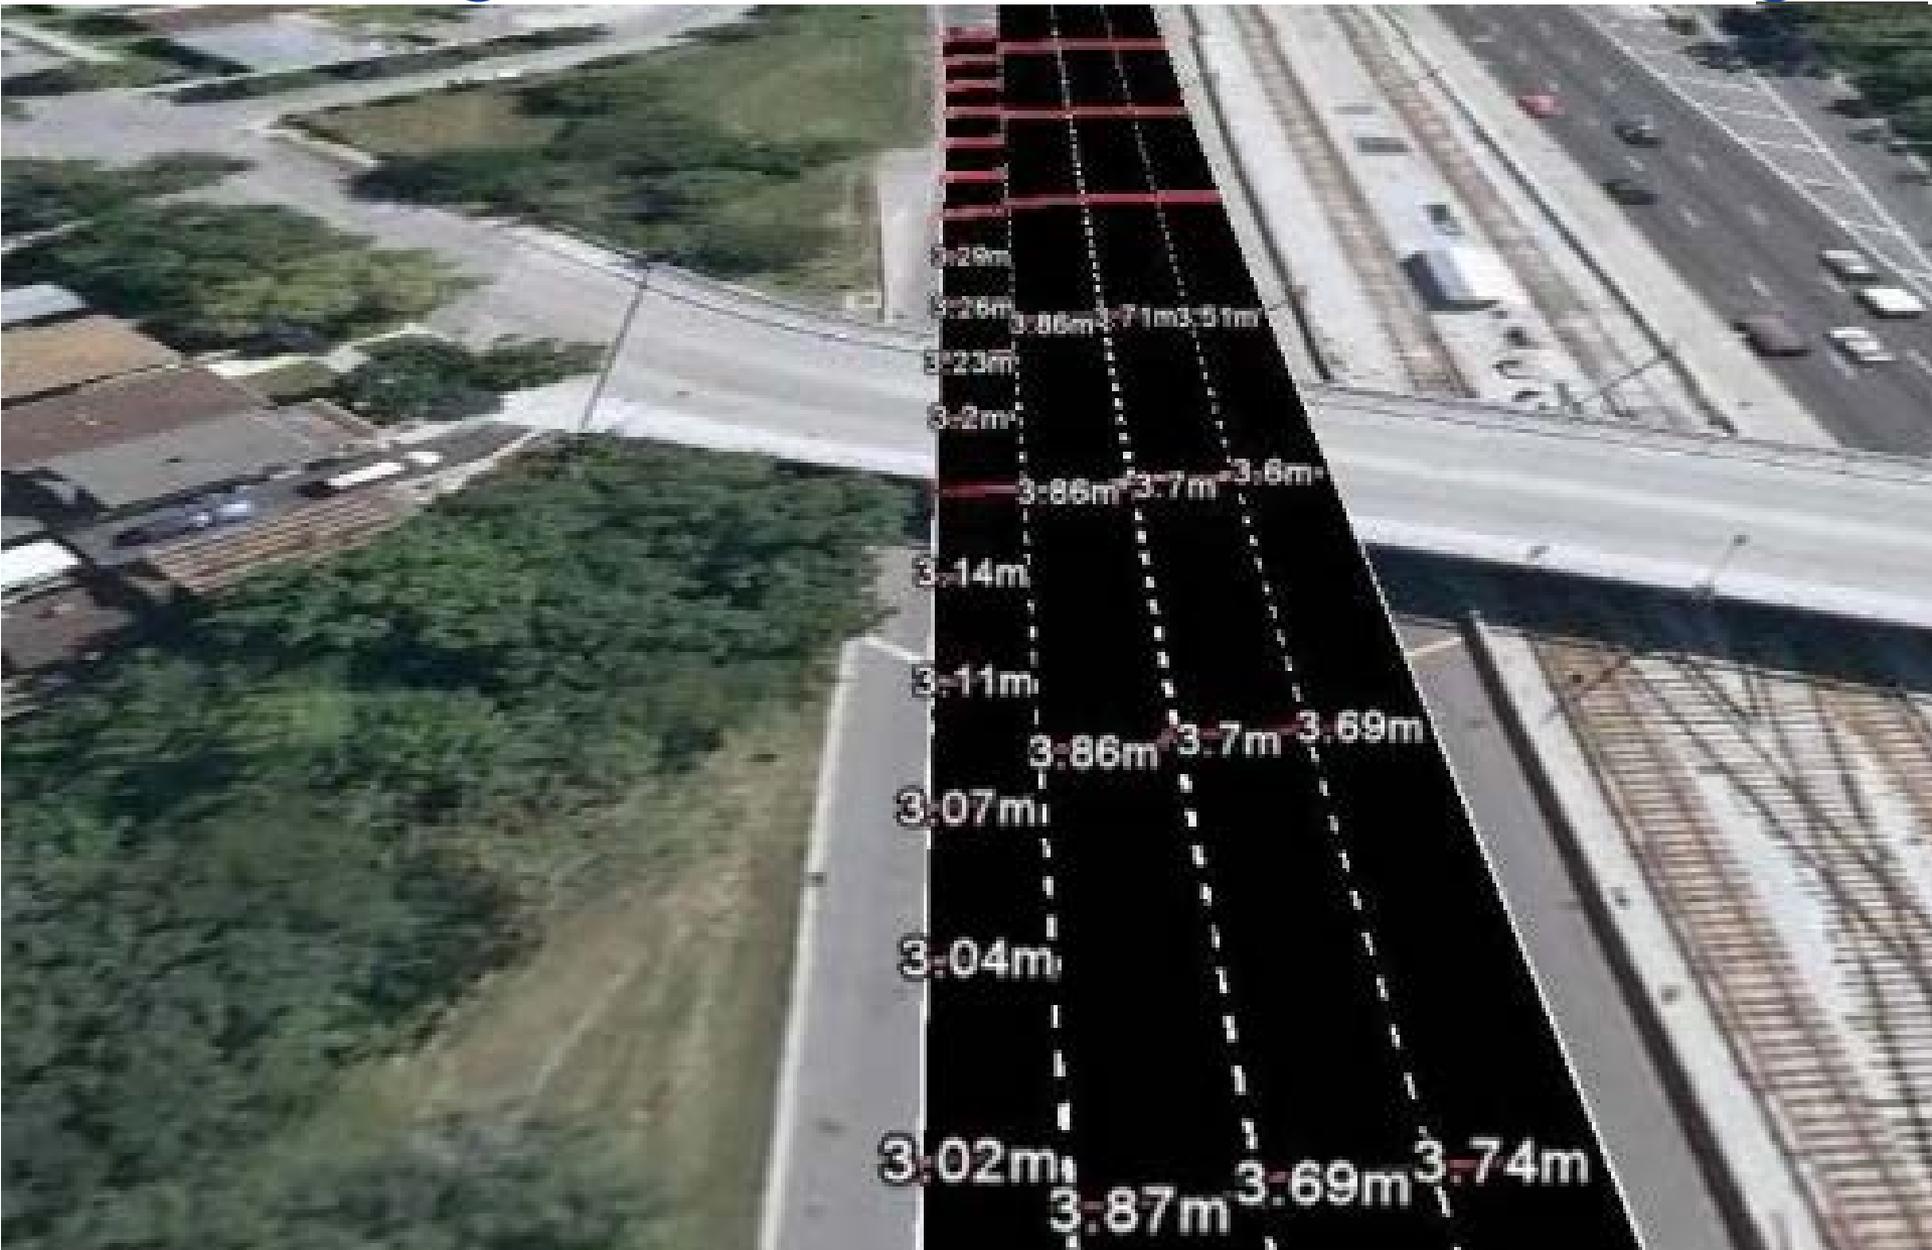

- ▶ Narrow Field of View
- ▶ Increased Detail Resolution
- ▶ Sign and Text Recognition

# Targeted Sign Cameras – Narrow FOV

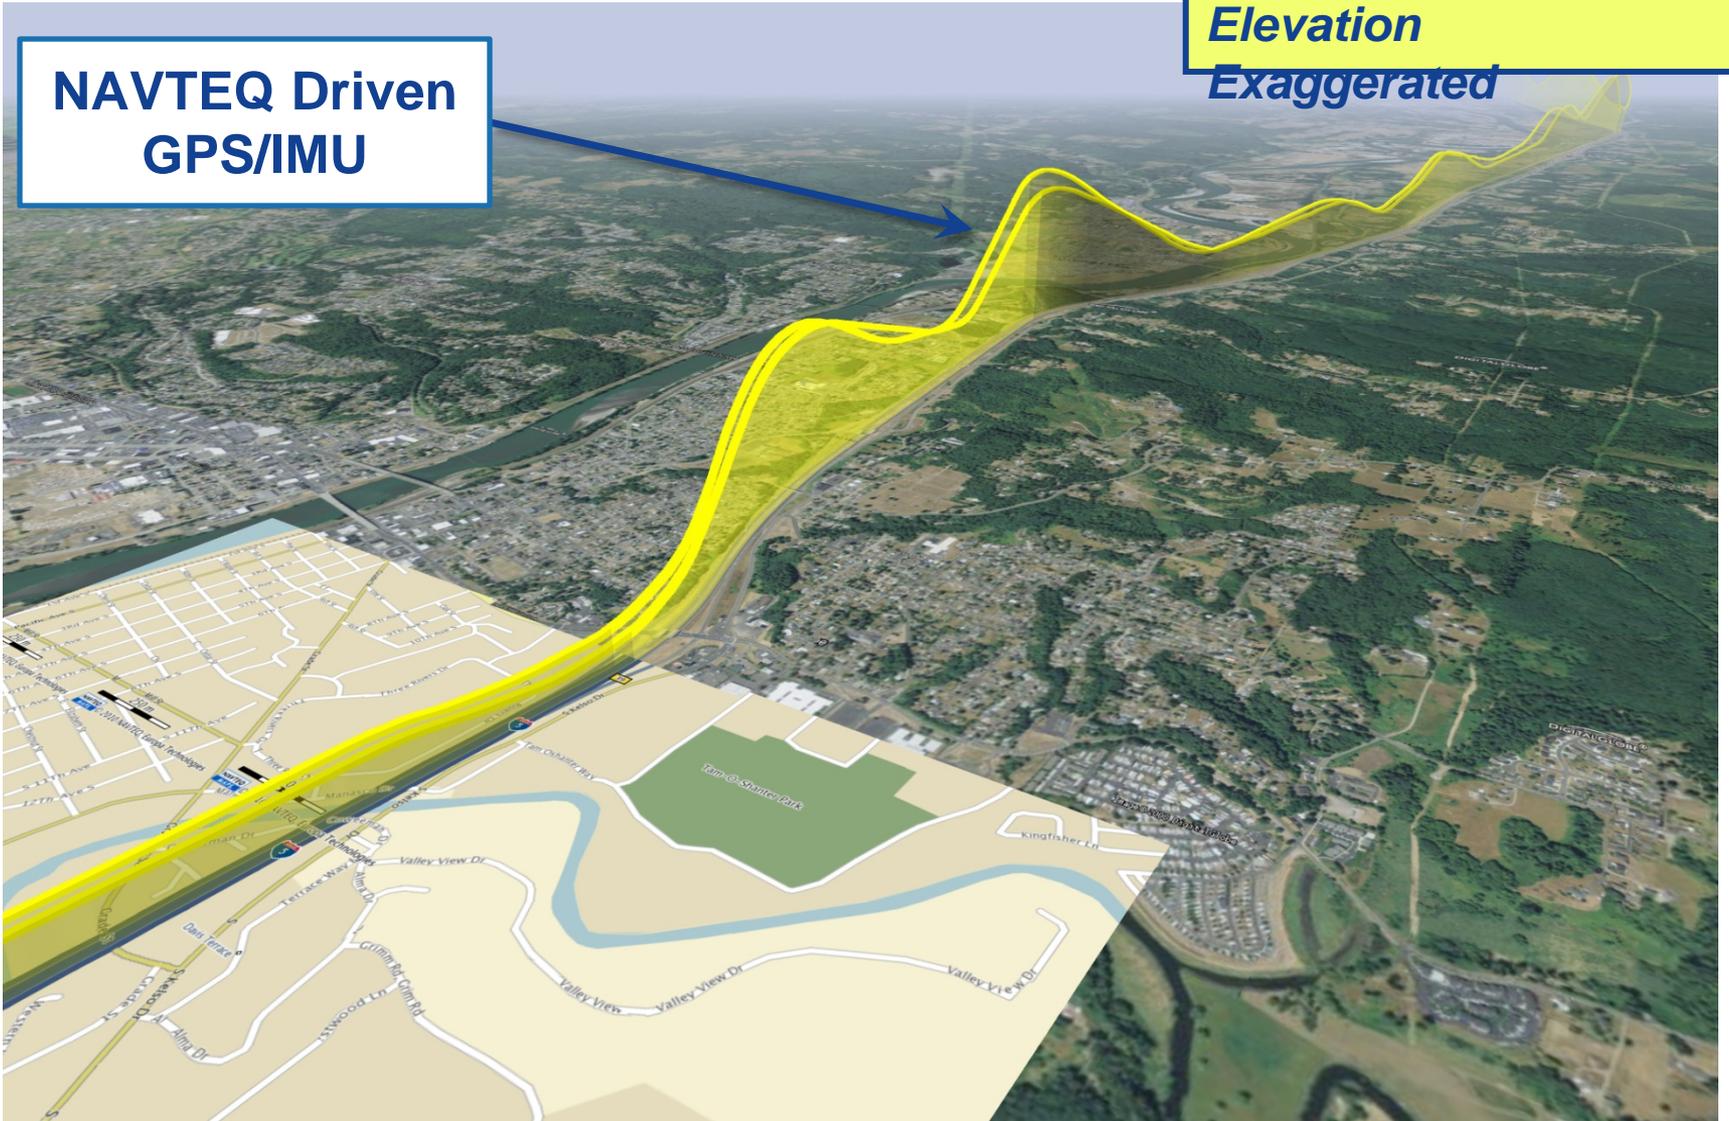

# Grounding it in Location and Positioning

# Positioning – High Accuracy IMU/GPS

NAVTEQ Driven  
GPS/IMU

Elevation

# Nokia True Increases Efficiency

- Faster with fewer people
- More efficient coding
- Platform for the future

# Video Presentation
